

# java.rmi.\* Naming

## Naming

```
void bind (String name, Remote obj) ⚡  
String[] list (String name) ⚡  
Remote lookup (String name) ⚡  
void rebind (String name, Remote obj) ⚡  
void unbind (String name) ⚡
```

## java.rmi.registry. LocateRegistry

```
Registry createRegistry (int port) ⚡  
Registry createRegistry (int port, RMIClientSocketFactory csf,  
                        RMIServerSocketFactory ssf) ⚡  
Registry getRegistry () ⚡  
Registry getRegistry (int port) ⚡  
Registry getRegistry (String host) ⚡  
Registry getRegistry (String host, int port) ⚡  
Registry getRegistry (String host, int port, RMIClientSocketFactory csf) ⚡
```

## Remote

## java.rmi.registry. Registry

```
void bind (String name, Remote obj) ⚡  
String[] list () ⚡  
Remote lookup (String name) ⚡  
void rebind (String name, Remote obj) ⚡  
void unbind (String name) ⚡
```
