

# javax.naming.\*

## Name

Methods declared in supertypes are hidden in subtypes

Cloneable

Serializable

Name

Accessors

String get (int posn)

Enumeration getAll ()

Name getPrefix (int posn)

Name getSuffix (int posn)

boolean isEmpty ()

Collectors

Name add (String comp)

Name add (int posn, String comp)

Name addAll (Name suffix)

Name addAll (int posn, Name n)

Object remove (int posn)

Object

Object clone ()

Other Public Methods

int compareTo (Object obj)

boolean endsWith (Name n)

int size ()

boolean startsWith (Name n)

CompositeName

CompositeName ()

# CompositeName (Enumeration comps)

CompositeName (String n)

boolean equals (Object obj)

int hashCode ()

String toString ()

CompoundName

CompoundName (Enumeration comps, Properties syntax)

CompoundName (String n, Properties syntax)

boolean equals (Object obj)

int hashCode ()

String toString ()

java.util.Enumeration

NamingEnumeration

void close ()

boolean hasMore ()

Object next ()

NameParser

Name parse (String name)
