

# javax.swing.\* CellEditor

Methods declared in super types are hidden in subtypes

 **Serializable**

 **AbstractCellEditor**

```
# void fireEditingCanceled ()
# void fireEditingStopped ()
# CellEditorListener[] getCellEditorListeners ()
```

 **CellEditor**

Accessors

Object **getCellEditorValue ()**

Event Methods

void **add / removeCellEditorListener (CellEditorListener l)**

boolean **isCellEditable (EventObject anEvent)**

boolean **shouldSelectCell (EventObject anEvent)**

Other Public Methods

void **cancelCellEditing ()**

boolean **stopCellEditing ()**

 **TableCellEditor**

javax.swing.table.  
Component **getTableCellEditorComponent (JTable table, Object value,  
boolean isSelected, int row, int column)**

 **TreeCellEditor**

javax.swing.tree.  
Component **getTreeCellEditorComponent (JTree tree, Object value,  
boolean isSelected, boolean expanded, boolean leaf, int row)**

 **TreeSelectionListener**

javax.swing.event.  
void **valueChanged (TreeSelectionEvent e)**

 **ActionListener**

java.awt.event.  
void **actionPerformed (ActionEvent e)**

 **ComboBoxEditor**

Accessors

Component **getEditorComponent ()**

Object **get / setItem ()**

Event Methods

void **add / removeActionListener (ActionListener l)**

Other Public Methods

void **selectAll ()**

 **DefaultCellEditor**

DefaultCellEditor (JTextField textField)

DefaultCellEditor (JCheckBox checkBox)

DefaultCellEditor (JComboBox comboBox)

int **get / setClickCountToStart ()**

Component **getComponent ()**

 **DefaultTreeCellEditor**

javax.swing.tree.  
DefaultTreeCellEditor (JTree tree, DefaultTreeCellRenderer renderer)

DefaultTreeCellEditor (JTree tree, DefaultTreeCellRenderer renderer, TreeCellEditor editor)

Accessors

Color **get / setBorderSelectionColor ()**

Font **get / setFont ()**

void **setTree (JTree newTree)**

Event Methods

# boolean **canEditImmediately (EventObject event)**

# CellEditorListener[] **getCellEditorListeners ()**

# boolean **shouldStartEditingTimer (EventObject event)**

Other Protected Methods

# Container **createContainer ()**

# TreeCellEditor **createTreeCellEditor ()**

void **determineOffset (JTree tree, Object value, boolean isSelected, boolean expanded, boolean leaf, int row)**

# boolean **inHitRegion (int x, int y)**

# void **prepareForEditing ()**

# void **startEditingTimer ()**

class DefaultTextField  
class EditorContainer

 **DefaultTreeCellEditor.DefaultTextField**

DefaultTextField (Border border)

Border **get / setBorder ()**

Font **getFont ()**

Dimension **getPreferredSize ()**

 **JTextField**

 **DefaultTreeCellEditor.EditorContainer**

EditorContainer ()

Accessors

Dimension **getPreferredSize ()**

Other Public Methods

void **EditorContainer ()**

void **dolayout ()**

void **paint (Graphics g)**

 **Container**

java.awt.
