

javax.swing.*

Action

Methods declared in supertypes are hidden in subtypes

**Action**

java.util. **EventListener**

java.awt.event. **ActionListener**

void actionPerformed (ActionEvent e)

**Action**

Accessors

Object getValue (String key)

boolean is / setEnabled ()

void putValue (String key, Object value)

Event Methods

void add / removeChangeListener (PropertyChangeListener listener)

String DEFAULT, NAME, SHORT_DESCRIPTION, LONG_DESCRIPTION, SMALL_ICON, ACTION_COMMAND_KEY, ACCELERATOR_KEY, MNEMONIC_KEY

**Cloneable**

**Serializable**

**AbstractAction**

AbstractAction ()

AbstractAction (String name)

AbstractAction (String name, Icon icon)

Accessors

Object[] getKeys ()

Event Methods

void firePropertyChange (String propertyName, Object oldValue, Object newValue)

PropertyChangeListener[] getPropertyChangeListeners ()

Object

Object clone () ↴

Serializable

**ActionMap**

Accessors + Collectors

Action get (Object key)

ActionMap get / setParent ()

void put (Object key, Action action)

void remove (Object key)

Other Public Methods

Object[] allKeys ()

void clear ()

Object[] keys ()

int size ()

**InputMap**

Accessors + Collectors

Object get (KeyStroke keyStroke)

InputMap get / setParent ()

void put (KeyStroke keyStroke, Object actionMapKey)

void remove (KeyStroke key)

Other Public Methods

KeyStroke[] allKeys ()

void clear ()

KeyStroke[] keys ()

int size ()

**ComponentInputMap**

ComponentInputMap (JComponent component)

JComponent getComponent ()

**Keymap**

javax.swing.text. **Keymap**

Action getAction (KeyStroke key)

Action[] getBoundActions ()

KeyStroke[] getBoundKeyStrokes ()

Action get / setDefaultAction ()

KeyStroke[] getKeyStrokesForAction (Action a)

String getName ()

Keymap get / setResolveParent ()

boolean isLocallyDefined (KeyStroke key)

void addActionForKeyStroke (KeyStroke key, Action a)

void removeBindings ()

void removeKeyStrokeBinding (KeyStroke keys)

**KeyBinding**

javax.swing.text. **JTextComponent.KeyBinding**

KeyBinding (KeyStroke key, String actionName)

KeyStroke key

String actionName

**AWTKeyStroke**

**KeyStroke**

KeyStroke **getKeyStroke** (char keyChar)

KeyStroke **getKeyStroke** (String s)

KeyStroke **getKeyStroke** (Character keyChar, int modifiers)

KeyStroke **getKeyStroke** (int keyCode, int modifiers)

KeyStroke **getKeyStroke** (int keyCode, int modifiers, boolean onKeyRelease)

KeyStroke **getKeyStrokeForEvent** (KeyEvent anEvent)
