java.security.*
Security

Serializable

CodeSource

CodeSource (URL url, java.security.cert.Certificate certs[])

Accessors
java.security.cert.Certificate[] getCertificates ()
URL getLocation ()

Object
boolean equals (Object obj)
int hashCode ()
String toString ()

Other Public Methods
boolean implies (CodeSource codesource)

Cloneable
Serializable
java.util. Hashtable
java.util. Properties

Provider

Provider (String name, double version, String info)

Accessors + Collectors
String getInfo ()
String getName ()
double getVersion ()
Object put (Object key, Object value)
void putAll (Map t)
Object remove (Object key)

Object
String toString ()

Other Public Methods
void clear ()
Set entrySet ()
Set keySet ()
void load (InputStream inStream) ↴
Collection values ()

Security

Static Methods
int **addProvider** (Provider provider)
Set **getAlgorithms** (String serviceName)
String **get** / **setProperty** (String key)
Provider **getProvider** (String name)
Provider[] **getProviders** ()
Provider[] **getProviders** (String filter)
Provider[] **getProviders** (Map filter)
int **insertProviderAt** (Provider provider, int position)
void **removeProvider** (String name)

Other Public Methods
Object run ()

Policy

Static Methods
Policy **get** / **setPolicy** ()

Accessors
PermissionCollection getPermissions (CodeSource codesource)
PermissionCollection getPermissions (ProtectionDomain domain)

Other Public Methods
boolean implies (ProtectionDomain domain, Permission permission)
void refresh ()
