javax.swing.event.*
TreeEvents

DefaultTreeCellEditor javax.swing.tree.

TreeModelListener
- void treeNodesChanged (TreeModelEvent e)
- void treeNodesInserted (TreeModelEvent e)
- void treeNodesRemoved (TreeModelEvent e)
- void treeStructureChanged (TreeModelEvent e)

TreeSelectionListener
- void valueChanged (TreeSelectionEvent e)

TreeWillExpandListener
- void treeWillCollapse (TreeExpansionEvent event)
- void treeWillExpand (TreeExpansionEvent event)

TreeExpansionListener
- void treeCollapsed (TreeExpansionEvent event)
- void treeExpanded (TreeExpansionEvent event)

EventListener java.util.

TreeModelEvent
- **TreeModelEvent** (Object source, Object[] path)
- **TreeModelEvent** (Object source, TreePath path)
- **TreeModelEvent** (Object source, Object[] path, int[] childIndices, Object[] children)
- **TreeModelEvent** (Object source, TreePath path, int[] childIndices, Object[] children)

Accessors
- int[] getChildIndices ()
- Object[] getChildren ()
- Object[] getPath ()
- TreePath getTreePath ()
- Object
-   String toString ()

TreeSelectionEvent
- **TreeSelectionEvent** (Object source, TreePath[] paths, boolean[] areNew,
        TreePath oldLeadSelectionPath, TreePath newLeadSelectionPath)
- **TreeSelectionEvent** (Object source, TreePath path, boolean isNew,
        TreePath oldLeadSelectionPath, TreePath newLeadSelectionPath)

Accessors
- TreePath getNewLeadSelectionPath ()
- TreePath getOldLeadSelectionPath ()
- TreePath getPath ()
- TreePath[] getPaths ()
- boolean isAddedPath ()
- boolean isAddedPath (TreePath path)
- boolean isAddedPath (int index)

Other Public Methods
- Object cloneWithSource (Object newSource)

TreeExpansionEvent
- **TreeExpansionEvent** (Object source, TreePath path)
- TreePath getPath ()

Serializable

EventObject java.util.
- **EventObject** (Object source)

Accessors
- Object getSource ()
- Object
-   String toString ()
