java.lang.*
ClassLoader

Methods declared in supertypes are are hidden in subtypes

ClassLoader

ClassLoader ()
ClassLoader (ClassLoader parent)

Static Methods

ClassLoader	**getSystemClassLoader** ()
URL	**getSystemResource** (String name)
InputStream	**getSystemResourceAsStream** (String name)
Enumeration	**getSystemResources** (String name) ↴

Accessors

#	Package getPackage (String name)
#	Package[] getPackages ()
ClassLoader	getParent ()
URL	getResource (String name)
InputStream	getResourceAsStream (String name)
Enumeration	getResources (String name) ↴
void	setClassAssertionStatus (String className, boolean enabled)
void	setDefaultAssertionStatus (boolean enabled)
void	setPackageAssertionStatus (String packageName, boolean enabled)
#	void setSigners (Class c, Object[] signers)

Other Public Methods

void	clearAssertionStatus ()
Class	loadClass (String name) ↴

Other Protected Methods

#	Class defineClass (String name, byte[] b, int off, int len) ↴
#	Class defineClass (String name, byte[] b, int off, int len, ProtectionDomain protectionDomain) ↴
#	Package definePackage (String name, String specTitle, String specVersion, String specVendor, String implTitle, String implVersion, String implVendor, URL sealBase) ↴
#	Class findClass (String name) ↴
#	String findLibrary (String libname)
#	Class findLoadedClass (String name)
#	URL findResource (String name)
#	Enumeration findResources (String name) ↴
#	Class findSystemClass (String name) ↴
#	Class loadClass (String name, boolean resolve) ↴
#	void resolveClass (Class c)

java.security. *SecureClassLoader*

SecureClassLoader ()
SecureClassLoader (ClassLoader parent)

Accessors

PermissionCollection getPermissions (CodeSource codesource)

Other Protected Methods

Class defineClass (String name, byte[] b, int off, int len, CodeSource cs)

java.net. **URLClassLoader**

URLClassLoader (URL[] urls)
URLClassLoader (URL[] urls, ClassLoader parent)
URLClassLoader (URL[] urls, ClassLoader parent, URLStreamHandlerFactory factory)

Static Methods

URLClassLoader	**newInstance** (URL[] urls)
URLClassLoader	**newInstance** (URL[] urls, ClassLoader parent)

Accessors + Collectors

URL[]	getURLs ()
#	void addURL (URL url)

Other Protected Methods

Package definePackage (String name, Manifest man, URL url) ↴

java.rmi.server. **RMIClassLoader**

String	**getClassAnnotation** (Class cl)
ClassLoader	**getClassLoader** (String codebase) ↴
RMIClassLoaderSpi	**getDefaultProviderInstance** ()
Class	**loadClass** (URL codebase, String name) ↴
Class	**loadClass** (String codebase, String name) ↴
Class	**loadClass** (String codebase, String name, ClassLoader defaultLoader) ↴
Class	**loadProxyClass** (String codebase, String[] interfaces, ClassLoader defaultLoader) ↴

java.rmi.server. *RMIClassLoaderSpi*

Accessors

String	getClassAnnotation (Class cl)
ClassLoader	getClassLoader (String codebase) ↴

Other Public Methods

Class	loadClass (String codebase, String name, ClassLoader defaultLoader) ↴
Class	loadProxyClass (String codebase, String[] interfaces, ClassLoader defaultLoader) ↴
