java.util.prefs.*

Methods declared in supertypes are hidden in subtypes

PreferencesFactory

Preferences **systemRoot** ()
Preferences **userRoot** ()

Preferences

Preferences ()

Static Methods
        void **importPreferences** (InputStream is)
Preferences **systemNodeForPackage** (Class c)
Preferences **systemRoot** ()
Preferences **userNodeForPackage** (Class c)
Preferences **userRoot** ()

Accessors
        String   get (String key, String def)
        boolean getBoolean (String key, boolean def)
        byte[] getByteArray (String key, byte[] def)
        double getDouble (String key, double def)
        float   getFloat (String key, float def)
        int   getInt (String key, int def)
        long   getLong (String key, long def)
        boolean isUserNode ()
        void   put (String key, String value)
        void   putBoolean (String key, boolean value)
        void   putByteArray (String key, byte[] value)
        void   putDouble (String key, double value)
        void   putFloat (String key, float value)
        void   putInt (String key, int value)
        void   putLong (String key, long value)

Collectors
        void   remove (String key)
        void   removeNode ()

Event Methods
        void   add / removeNodeChangeListener (
                    NodeChangeListener ncl)
        void   add / removePreferenceChangeListener (
                    PreferenceChangeListener pcl)

Object
        String toString ()
Other Public Methods
        String absolutePath ()
        String[] childrenNames ()
        void   clear ()
        void   exportNode (OutputStream os)
        void   exportSubtree (OutputStream os)
        void   flush ()
        String[] keys ()
        String name ()
        Preferences node (String pathName)
        boolean nodeExists (String pathName)
        Preferences parent ()
        Object run ()
        void   sync ()

AbstractPreferences

AbstractPreferences (AbstractPreferences parent,
                        String name)

Accessors
        # AbstractPreferences getChild (String nodeName)
        # String getSpi (String key)
        # boolean isRemoved ()
        # void   putSpi (String key, String value)

Collectors
        # void   removeNodeSpi ()
        # void   removeSpi (String key)

Other Protected Methods
        # AbstractPreferences[] cachedChildren ()
        # AbstractPreferences childSpi (String name)
        # String[] childrenNamesSpi ()
        # void   flushSpi ()
        # String[] keysSpi ()
        # void   syncSpi ()

PreferenceChangeEvent

PreferenceChangeEvent (Preferences node,
                           String key,
                           String newValue)

        String getKey ()
        String getNewValue ()
        Preferences getNode ()

NodeChangeEvent

NodeChangeEvent (Preferences parent,
                     Preferences child)

        Preferences getChild ()
        Preferences getParent ()

Serializable

java.util. **EventObject**

EventObject (Object source)

Accessors
Object getSource ()
Object
String toString ()

PreferenceChangeListener

void preferenceChange (PreferenceChangeEvent evt)

NodeChangeListener

void childAdded (NodeChangeEvent evt)
void childRemoved (NodeChangeEvent evt)

java.util. *EventListener*

int MAX_KEY_LENGTH, MAX_VALUE_LENGTH,
    MAX_NAME_LENGTH
