# java.beans.*
Persistence

Methods declared in supertypes are hidden in subtypes

XMLDecoder

XMLDecoder (InputStream in)
XMLDecoder (InputStream in, Object owner)
XMLDecoder (InputStream in, Object owner, ExceptionListener exceptionListener)

Accessors
  Object get / setOwner ()
Event Methods
  ExceptionListener get / setExceptionListener ()
Other Public Methods
  void close ()
  Object readObject ()

XMLEncoder

XMLEncoder (OutputStream out)

Accessors
Object get / setOwner ()
Other Public Methods
  void close ()
  void flush ()

Encoder

Accessors + Collectors
  Object get (Object oldInstance)
PersistenceDelegate get / setPersistenceDelegate (Class type)
  Object remove (Object oldInstance)
Event Methods
  ExceptionListener get / setExceptionListener ()
Other Methods
  void writeExpression (Expression oldExp)
  void writeStatement (Statement oldStm)
void writeObject (Object o)

ExceptionListener

void exceptionThrown (Exception e)

Statement

Statement (Object target, String methodName, Object[] arguments)

Accessors
Object[] getArguments ()
String getMethodName ()
Object getTarget ()
Object
String toString ()
Other Public Methods
  void execute ()

Expression

Expression (Object target, String methodName, Object[] arguments)
Expression (Object value, Object target, String methodName, Object[] arguments)

Accessors
Object getValue ()
  void setValue (Object value)
Object
String toString ()

PersistenceDelegate

  void writeObject (Object oldInstance, Encoder out)
void initialize (Class type, Object oldInstance, Object newInstance, Encoder out)
Expression instantiate (Object oldInstance, Encoder out)
boolean mutatesTo (Object oldInstance, Object newInstance)

DefaultPersistenceDelegate

DefaultPersistenceDelegate ()
DefaultPersistenceDelegate (String[] constructorPropertyNames)
