java.beans.*
BeanInfo

Methods declared in supertypes are hidden in subtypes

Introspector

```
   String  decapitalize  (String name)
     void  flushCaches  ()
     void  flushFromCaches  (Class clz)
 BeanInfo  getBeanInfo  (Class beanClass)
 BeanInfo  getBeanInfo  (Class beanClass,  int flags)
 BeanInfo  getBeanInfo  (Class beanClass,  Class stopClass)
 String[]  getBeanInfoSearchPath  ()
     void  setBeanInfoSearchPath  (String path[])

      int  USE_ALL_BEANINFO,  IGNORE_IMMEDIATE_BEANINFO,
           IGNORE_ALL_BEANINFO
```

BeanInfo

```
Accessors
            BeanInfo[]  getAdditionalBeanInfo()
         BeanDescriptor  getBeanDescriptor()
                    int  getDefaultPropertyIndex()
        java.awt.Image  getIcon (int iconKind)
     MethodDescriptor[]  getMethodDescriptors()
   PropertyDescriptor[]  getPropertyDescriptors()
Event Methods
                    int  getDefaultEventIndex()
  EventSetDescriptor[]  getEventSetDescriptors()

      int  ICON_COLOR_16x16,
           ICON_COLOR_32x32  ICON_MONO_16x16,
           ICON_MONO_32x32
```

java.beans.beancontext. BeanContextServiceProviderBeanInfo

```
BeanInfo[] getServicesBeanInfo()
```

SimpleBeanInfo

```
java.awt.Image loadImage (String resourceName)
```

AppletInitializer

```
void  activate (Applet newApplet)
void  initialize (Applet newAppletBean,  BeanContext bCtxt)
```

Beans

```
  Object  get / isInstanceOf  (Object bean,  Class targetType)
  Object  instantiate  (ClassLoader cls,  String beanName)
  Object  instantiate  (ClassLoader cls,  String beanName,  BeanContext beanContext)
  Object  instantiate  (ClassLoader cls,  String beanName,  BeanContext beanContext,  AppletInitializer initializer)
 boolean  isDesignTime ()
 boolean  isGuiAvailable ()
    void  setDesignTime  (boolean isDesignTime)
    void  setGuiAvailable  (boolean isGuiAvailable)
```
